CC13 bulk rolls

1360sqm

4 linear layers

Stornoway, Scotland, UK

Duncan Mackay & Sons Ltd

Landfill drainage project Carrier drain reinforced with Concrete Canvas as part of a cut off drainage system to prevent ground water seeping into a landfill site.

The ditch profile was 3.6m at it's widest point with a depth of approx. 600mm. 4 linear layers of CC13 were used. The upper two layers of CC were fixed into the compacted gravel substrate using ground pegs. Adjacent CC layers were fixed together using collated screws at the overlaps. See Fig. 1

Fig 1.
