Part of the project site before CC installation

CC5 bulk rolls were installed using a small truck crane and spreader beam.

## 30.11.11 Case Study : Monegros Channel

The Monegros Channel is an old concrete channel, with a perimeter of 40 metres. To resolve water leakage and repair damage caused by erosion the contractor used CC5 due to its ease of use, durability, strength and capability as a waterproofing material.

CC5 was layered over the perimeter and sealed by applying an automatic thermal welding process along each joint. A total of 1000m<sup>2</sup> was delivered on site in bulk rolls.

CC can be thermally welded, enabling it to provide waterproof protection.

Thermally welded joints held flat during setting with wooden boards

CC was secured at the crest with Hilti DBZ Wedge Anchors
